Your Message

Hello Supervisors, I have been reading about the proposed data center complex which will, upon completion, be the greatest consumer of electricity in the TEP system and also use tremendous amounts of water. I'm concerned about both the electricity and the water, however, I think the water is the most concerning. Although the company has stated that it will recharge the water, I doubt they will be able to. I think conserving water in our Tucson area is the most important issue of our current time.
So please vote "NO" on the proposal to allow the data center to be built.

Please type the topic or subject of your concern	Project Blue Data Centers are Bad for Pima County
Your Message	<p>Dear Supervisors,</p> <p>I live in district 1 but the topic I'm writing about is so large that I felt it important to contact all of you. I absolutely oppose Project Blue, the massive data center complex proposed near the county fair grounds. I lived for many years in Chandler where we had to work with the City Council in the fight to limit the construction of data centers within that city's limits. The reasoning was clear after the first data center was built: data centers use enormous amounts of land, water and electrical power and yield very few jobs. Pima County will suffer the same consequences if Project Blue is allowed to go forward. Although details available to the public are sketchy at this point, the amount of water and electrical power that Project Blue will consume are so significant, that it will dampen this county's ability to lure other economic opportunities to the area due to lack of available resources. I urge you to vote no on this project and instead work together to lure business investment that will create far more jobs than the paltry few needed to maintain a data center once construction is complete.</p> <p>Respectfully submitted, Roger Stage 5200 N Grey Mountain Trail Tucson, AZ 85750</p>
