**Subject:** Resolution 2020-96

**CAUTION:** This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Dear Ms Julie Casaneda,

I would like to express my respectful opposition to Resolution 2020-96 and request the board to end the mask mandate for school districts and businesses. It's time to let the citizens of Pima County make their own decisions regarding personal health and safety. I have two children attending school where masks are required. They would love nothing more than to spend 7 hours each day mask free with their teacher and friends. Please consider ending Resolution 2020-96.

Thank you,

Megan Swartz

**Subject:** Time to Open Up

**CAUTION:** This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Dear Board of Supervisors,

It is time to open up schools, businesses, churches and in general everything else in Pima County. Your mask mandate is doing two things, scaring the uninformed and making you the laughing stock of those many Pima County voters and residents that understand the science. I just shake my head in disbelief at your ignorance of this topic.

Get with it and get on with life praise be to God,

Sincerely  
Gary J. Olson

**Subject:** Masks

CAUTION: This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Pima County Board of Supervisors,

Remove your "mask mandate" immediately. Make them optional, as they should be. The science has shown that masks are ineffective in preventing the spread of COVID 19.. The science has also shown that children are hardly impacted by COVID 19 and adults have all had the opportunity to get vaccinated (as I have now!).

I plan to send you daily emails and updates. Please do NOT allow politics and your dislike for the Governor to sway your opinions.

Thank you!  
Susan Kelly

**Subject:** End Mask Mandate!

**CAUTION:** This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Ms. Julie Castaneda,

My name is Barbara Hall and my address is 5751 N Kolb Rd #23102, Tucson, AZ 85750. I am asking respectfully for you that you voice my opposition the the Mask Mandate to the Board of Supervisors. I am strongly opposed to this being mandated. It needs to be a personal choice.

Warm regards, Barbara Hall

Dear Board of Supervisors,

For some reason when I sent you this message earlier today the response said I live outside of Pima County. That is inaccurate so I am sending you my comments and recommendations a second time with my address.

It is time to open up the public schools, eliminate mask mandates on our local businesses, churches and in general everything else in Pima County. Your mask mandate is doing three things, (1) scaring the uninformed, (2) hurting our economy and (3) making you the laughing stock of many Pima County voters and residents that understand the mask mandate is no longer needed and does not follow the science. I just shake my head in disbelief at your lack of information on this topic.

Get with it and get on with life. Praise be to God.

**CAUTION:** This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Ms. Castaneda, I am writing to you to ensure that you will follow Gov. Deucy's signed bill and drop the mask mandate for Pima County, as he dropped the mandate for the whole state. There is so much evidence from doctors on the frontline doctors movement that show real evidence masks do not prevent covid, but are actually detrimental to our health. Trusting the whole board to respectfully represent the people in Pima County by drooping the mandate and making it an indivial choice.

Thank you so much,

Liz Crump

The New England Journal of Medicine, April 1, 2020 <http://www.NEJM.org>

Masks do not prevent virus respiratory illness. Size matters! Viruses are 50x smaller than bacteria and 1000x smaller than a hair size of bacteria = 5 micrometer (5  $\mu$ m) size of particles in wood smoke (wildfire): 0.4-0.7 micrometers (0.5  $\mu$ m) size of virus = 0.1 micrometer (Influenza and SARS-CoV-2) (0.1  $\mu$ m) comparison: human hair is 100 micrometers (100  $\mu$ m) (one million micrometers = one meter) CDC: "Cloth masks do not catch small harmful particles in smoke." Transmission of SARS-CoV-2 Droplets • Virus is transmitted through respiratory droplets produced when an infected person coughs, sneezes or talks. Larger respiratory droplets (>5  $\mu$ m) remain in the air for only a short time and travel only short distances generally <1 meter. They fall to the ground quickly. [https://www.thelancet.com/journals/lanres/article/PIIS2213-2600\(20\)30245-9/fulltext](https://www.thelancet.com/journals/lanres/article/PIIS2213-2600(20)30245-9/fulltext) • This idea guides the CDC's advice to maintain at least a 6-foot distance. • Virus-laden small (<5  $\mu$ m) aerosolized droplets can remain in the air for at least 3 hours and travel long distances. •

<https://www.nejm.org/doi/pdf/10.1056/NEJMc2004973?articleTools=true> Air currents • In air-conditioned environment these large droplets may travel farther. • However, ventilation — even the opening of an entrance door and a small window can dilute the number of small droplets to one half after 30 seconds. (This study looked at droplets from uninfected persons). This is clinically relevant because poorly ventilated and populated spaces, like public transport and nursing homes, have high SARS-CoV-2 disease transmission despite physical distancing.

[https://www.thelancet.com/journals/lanres/article/PIIS2213-2600\(20\)30245-9/fulltext](https://www.thelancet.com/journals/lanres/article/PIIS2213-2600(20)30245-9/fulltext) Objects and surfaces • Person to person touching • The CDC's most recent statement regarding contracting COVID-19 from touching surfaces: "Based on data from lab studies on Covid-19 and what we know about similar respiratory diseases, it may be possible that a person can get Covid-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose or possibly their eyes," the agency wrote. "But this isn't thought to be the main way the virus spreads.

<https://www.cdc.gov/media/releases/2020/s0522-cdc-updates-covid-transmission.html>. • Chinese study with data taken from swabs on surfaces around the hospital [https://wwwnc.cdc.gov/eid/article/26/7/20-0885\\_article?deliveryName=USCDC\\_333-DM25707](https://wwwnc.cdc.gov/eid/article/26/7/20-0885_article?deliveryName=USCDC_333-DM25707) • The surfaces where tested with the PCR (polymerase chain reaction) test, which greatly amplifies the viral genetic material if it is present. That material is detectable when a person is actively infected. This is thought to be the most reliable test. • Computer mouse (ICU 6/8, 75%; General ward (GW) 1/5, 20%) • Trash cans (ICU 3/5, 60%; GW 0/8) • Sickbed handrails (ICU 6/14, 42.9%; GW 0/12) • Doorknobs (GW 1/12, 8.3%) • 81.3% of the miscellaneous personal items were positive: • Exercise equipment • Medical equipment (spirometer, pulse ox, nasal cannula) • PC and iPads • Reading glasses • Cellular phones (83.3% positive for viral RNA) • Remote controls for in-room TVs (64.7% percent positive) • Toilets (81.0% positive) • Room surfaces (80.4% of all sampled) • Bedside tables and bed rails (75.0%) • Window ledges (81.8%) • Plastic: up to 2-3 days • Stainless Steel: up to 2-3 days • Cardboard: up to 1 day • Copper: up to 4 hours • Floor – gravity causes droplets to fall to the floor. Half of ICU workers all had virus on the bottoms of their shoes Filter Efficiency and Fit \*Data from a University of Illinois at Chicago review <https://www.cidrap.umn.edu/news-perspective/2020/04/commentary-masks-all-covid19-not-based-sound-data> • HEPA (high efficiency particulate air) filters – 99.97 – 100% efficient. HEPA filters are tested with particles that are 0.125  $\mu$ m. • Masks and respirators work by collecting particles through several physical mechanisms, including diffusion (small

particles) and interception and impaction (large particles) • N95 filtering facepiece respirators (FFRs) are constructed from electret (a dielectric material that has a quasi-permanent electric charge. An electret generates internal and external electric fields so the filter material has electrostatic attraction for additional collection of all particle sizes. As flow increases, particles will be collected less efficiently. • N95 – A properly fitted N95 will block 95% of tiny air particles down to 0.3  $\mu\text{m}$  from reaching the wearer's face. <https://www.honeywell.com/enus/newsroom/news/2020/03/n95-masks-explained>. • But even these have problems: many have exhalation valve for easier breathing and less moisture inside the mask. • Surgical masks are designed to protect patients from a surgeon's respiratory droplets, aren't effective at blocking particles smaller than 100  $\mu\text{m}$ . • <https://webcache.googleusercontent.com/search?q=cache:VLXWeZBI7YJ:hhttps://multimedia.3m.com/mws/media/957730O/respirators-and-surgicalmasks-contrast-technical-bulletin.pdf+&cd=13&hl=en&ct=clnk&gl=us> •

**CAUTION:** This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Dear Pima County Supervisors,

My wife and I plead with you to rescind Resolution 2020-96. We are John A. & Helga R. Tirrell, 1205 E. Deer Canyon Rd., Tucson, AZ 85718.

We want to make our own decisions about our personal health and safety. We know what is best for us. We're sorry, but well intentioned civil servants no matter how educated or intelligent cannot make these types of personal decisions for us with any degree of accuracy or acceptability. It is time for our elected leaders to get out of our way and let us lead our lives as we know is best for us.

Sincerely,

John A. & Helga R. Tirrell
