This procurement involves "a comprehensive water infrastructure upgrade requiring contractors to furnish all labor, materials, equipment, and services to complete a new well site with associated infrastructure. Key project deliverables include installing a new submersible pump, chlorination facility, transmission main, hydro tank, and comprehensive electrical and control systems with SCADA integration." With site address at 11700 S. Harrison Rd, it's difficult to ignore the proximity of this \$1.58 million pump well upgrade to the proposed site of the Project Blue data center. We know that there are negotiations going on behind closed doors about shunting water to Project Blue (one of the key reasons the City of Tucson is required to annex the land). We leave as an open-ended question whether or not this upgrade, including its SCADA control system, may be part of that infrastructure.
