Think about this logically. If our water situation is so dire that we need to start drinking treated sewage water to survive, then every single drop of that reclaimed water represents a vital part of our future drinking supply. When you give millions of gallons daily to cool computer servers, you're literally taking water out of the mouths of future generations.

Your Message

Dear Pima County Board of Supervisors,

I am writing in regard to the meeting on June 17, 2025 and the vote pertaining to selling 290 acres near Houghton and Brekke, to a developer.

The developer's parent company, Blue Owl Capital Funds, is known for funding data centers. These are well known to impact local "dark skies" conditions, and use incredibly high amounts of water. In addition, they would be one of TEP's largest customers for power consumption, which puts more load on our existing grid, and will likely become a "reason" to increase rates.

I am a 40 year resident of rural Pima County, and am vehemently against this sale.

Please vote NO on this sale.

Sincerely,

J. Nevins

Would you like a response?

Yes

Supervisor-

First, require complete disclosure of water consumption projections for all ten potential data centers. Second, establish binding caps on water usage, accompanied by significant financial penalties for overuse. Third, negotiate community benefit agreements including local hire requirements, living wages, and environmental protections

Hello,

My name is Crystal Allen and I live in district 5. I would like to request that my representative Andres Cano vote No on the request to transfer 290 acres of land to Beale Infrastructure for a creation of an AI data center.

Data centers are huge energy and water users. As we are located in the desert this is not a smart decision for our future.

Please vote No.

Thank you,

Crystal Allen
District 5 Resident
