Re: 3/1/22 Addendum Agenda Item: Please vote "no" to Tenex Software Solutions Contract

Dear Supervisor Grijalva:

I urge you to vote "no" at this time against approving the \$1.5 million contract with Tenex Software Solutions for the following reasons:

- Internet connectivity must remain unbroken at all times on election day for these e-poll books to function effectively. There is no evidence that this kind of internet connectivity can be assured in rural areas, on tribal lands, or in underserved communities within the Tucson metro area.
- You are deciding whether to move from trustworthy record-keeping on paper to an untrustworthy electronic system in a time when rolling blackouts are becoming more common. If the lights go out, do we just close the polls?
- Senior leadership in the Pima County Elections division is retiring. This new system requires experienced leadership to implement without errors. Doing a "practice run" on the 2022 election with so many important statewide offices at stake is irresponsible during this time of Pima County's elections leadership in transition.
- At the discussion on 3/1/22, please ask staff to provide audits or other side-by-side analysis showing the cost savings of e-poll books and voting centers

versus precincts with paper polling books. This side-by-side analysis should also include the total annual cost for all the electronics and software used during elections including voting machines and software. Does this ballooning annual cost for more and more voting machines and software exceed the cost of a paper-based system of paper ballots, paper polling books and machine/hand counts to certify election results? Please show us the actual numbers, assuming staff has done that analysis, before recommending another \$1.5 million in expenditures for cloud-based solutions.

- Has Pima County ever held public polls or surveys where members of the public were asked to provide input concerning whether there should be more

FD-2872-20-01-18-PC-CK-01-11
R

or less e-voting technology in Pima County? If not, please consider holding public forums about this trend toward electronic centralization of the voting process. This is a non-partisan issue and a great concern to many in the community regardless of political party. I for one am concerned that Tenex Corporation has less than 20 employees yet its website states they "serve" more than 32 million American voters. This kind of top-down control of our elections process by a private corporation is taking us in the wrong direction to ensure a safe and fair voting system for people in all political parties.

I request the following comment becomes part of the Agenda comments for the Board of Supervisors Meeting of Tuesday, March 1, 2022.

Addendum items 3 and 4 regarding Vote Centers need more research and discussion as I stated prior to the February meeting, The idea has merit but several potential obstacles need to be researched further. For the 2022 voting season some polling centers could be eliminated requiring less equipment and staffing. See how this works. Keeping voters voting in areas near an individual's home would be a way to help insure fraud and ballot harvesting issues are minimal. There is no need to increase the voting timeframe as it is currently adequate and this would save staffing costs over the vote centers.

The necessary equipment to produce appropriate ballot for each voter is expensive and prone to problems (disruption of the transmission of information, other malfunctions, as well as the physical security of the data involved.) The training to insure equipment runs properly will be significant. There is warranted mistrust among citizens regarding the manipulation of electronic transmissions.

We all must remember voting is not only a right of citizens but a privilege and should be treated as such. Change in tradition can cause confusion if not well publicized and explained to the public and requires careful planning and a slow introduction.

Vote to send this issue back to for additional planning.

Gisela & Mike Aaron, Voters in Rita Ranch. Please add our comments into official records.

3/1/22 Addendum Item: Vote "NO" to Tenex Software Solutions Contract

Pima County Board of Supervisors,

We urge you to NOT approve the \$1.5 million contract with Tenex Software Solutions. Why?

1. Uninterrupted Internet connection during Election Day is necessary for the e-poll books to function well. This is of great concern to us. Can you guarantee that internet connectivity will be secure in rural areas, within the Tucson metro area, or on tribal lands? We greatly doubt it.
2. Voters don't trust the e-poll books and Tenex software. We are concerned with Internet security, with the inexperienced new staff using them, and concerned that they receive sufficient and appropriate training. It would make it more difficult to observe when shenanigans are happening. Just look at the last election and the chaos those e-poll books caused in Maricopa County. E-poll books caused for an election day to last an entire week or was it a month? Do not approve this costly, hackable, and very unreliable electronic system.
3. Senior leadership in the Pima County Elections division are retiring. This system requires an experienced staff to implement the change without errors. Using the 2022 election as a practice run is unacceptable with so many vital statewide positions at stake. It is irresponsible during a time when Pima County's elections top management are in transition. What is the hurry to install the Tenex Software Solutions?
4. Did Procurement staff provide a detailed analysis of cost savings, if any, of e-poll books and "voting centers" versus precincts with paper polling books? The analysis should include total annual costs for all electronic and software used during elections including voting machines and software. Does the expanding annual cost for voting machines and software exceed the cost of a paper-based system of paper ballots, paper polling books or machine-/and hand counts to certify election results? Did Procurement staff demonstrate due diligence that they have done said detailed analysis, before requesting \$1.5 million in expenditures for cloud-based solutions?

102072200327000010
B

5. Have voters been given a chance for input during public events? The sudden move toward electronic centralization of the voting process is highly suspect. We do not trust it! The decision should be a non-partisan and is of great concern to the community regardless of political party.

6. A quick Internet search revealed a Security Warning for their website! <https://www.tenexsolutions.com/about.html>

Warning: Potential Security Risk Ahead

Firefox detected an issue and did not continue to www.tenexsolutions.com. The website is misconfigured. It's likely the website's certificate is expired, which prevents Firefox from connecting securely. If you visit this site, attackers could try to steal information like your passwords, emails, or credit card details. What can you do about it?

The issue is most likely with the website, and there is nothing you can do to resolve it. You can notify the website's administrator about the problem.

To top it off, we found there is a sister company of Tenex Software Solutions based in RUSSIA!

At a time when voters distrust those electronic systems, it is reprehensible to even suggest purchasing them!

We insist on old fashioned, reliable paper rolls. Secure paper ballots with multiple security provisions. Limited paper at small polling places near voters. Chain of custody for the secure paper! Chain of custody for every step of the way. Access of observers. Oversight by both parties. One day election day. Voter ID. Voting for American or Naturalized citizens only! Limited ballots mailed to military and by request only.

Voters demand AUDITS for every election from now on. This is our right as provided by the law.

Following is my comment for the Board of Supervisors Meeting 03-01-22

Addendum #1 Item #4 Tenex Software Solutions, Inc.

When motion to reconsider is approved, please review how the Board of Supervisors has included public input on new software options. Voting public must have an opportunity to evaluate what you are doing with this major change. Input from public should not be limited to just commenting on this Agenda. When so many questions remain about the integrity of the 2020 election, we want confidence our one vote to counts. Internet connectivity was a problem and concern in 2020. So why are you considering equipment that requires uninterrupted connectivity? Why are we having a public business so much control over our election? The Pima County Elections Division has new and inexperienced leadership. Why are you using the Primary Election cycle as a first try on effectiveness of new equipment, new methods in Pima County? Please vote NO on this equipment and allow time to think through the ramifications of your vote. Vote NO if you have even the slightest unanswered concern.

2/28/2022

Hon. Supervisors and Clerk of the Board:

I urge you to vote "no" at this time against approving the \$1.5 million contract with Tenex Software Solutions for the following reasons:

1. Tenex has a proven track record of avoidable errors for which taxpayers paid dearly. These hyperlinks provide links to problems experienced in Texas, Idaho, Ohio, and Pennsylvania. Dallas county taxpayers had to pay an additional \$6 million to fix the fact that Tenex e-polling books didn't work securely with their voting machines. Multiple software failures and jammed phone lines in Bannock County Idaho caused chaos. Tenex provided a public apology to Hamilton County, Ohio residents (both Republicans and Democrats were in an uproar) when over 4,000 voters were thrown off the voting e-books and couldn't vote. In LeHigh County, Pennsylvania a pollworker reported an accidental discovery of a very simple hack that would have allowed the same person to vote more than once. To think that we can successfully implement Tenex software by this July without problems is asking for trouble.

taxpayers an additional \$6 ...

2. Internet connectivity must remain unbroken at all times on election day for these e-poll books to function effectively. There is no evidence that this kind of internet connectivity can be assured in rural areas, on tribal lands, or in underserved communities within the Tucson metro area.
3. You are deciding whether to move from trustworthy record-keeping on paper to an untrustworthy electronic system in a time when rolling blackouts are becoming more common. In the last year in central Tucson we have experienced 3-4 power disruptions, both summer and winter. If the lights go out on voting day, do we just close the polls?
4. Per the discussion at the last Board meeting, senior leadership in the Pima County Elections division is retiring. This new system requires experienced leadership to implement without errors. Doing a "practice run" on the 2022 election with so many important statewide offices at stake is irresponsible.
5. I am very concerned about our collective "magical thinking" that abdicating our civic responsibility to computers is somehow better than the methods that have worked just fine for over 200 years: The increasing rancor over vote counts since 2000 seems to be tied to electronic voting, where we are introducing third party software developers into local elections. In my opinion, local democracy should always be in the hands of local people - in other words - paper ballots, hand counts, verified at the poll by involved and active citizenry. Just because the Feds have provided grant money that greases the wheels for us to turn over our entire lives to digital systems doesn't mean that we should. It is very very important for our Board of Supervisors to exercise wise judgment and fiscal accountability on behalf of the taxpayers. Therefore prior to the discussion of this agenda item, please ask staff to provide audits or other side by-side analysis showing the cost savings of e-poll books and voting centers versus precincts with paper polling books. This side-by-side analysis should *also include the total annual cost for all the electronics and software used during*

elections including annual maintenance, annual software updates including that used in voting machines and software. Does this ballooning annual cost for more and more voting machines and software exceed the cost of a paper-based system of paper ballots, paper polling books and machine/hand counts to certify election results? Please show us the actual numbers, assuming staff has done that analysis, before recommending another \$1.5 million in expenditures for cloud-based solutions.

6. Has Pima County ever held public polls or surveys where members of the public were asked to provide input concerning whether there should be more or less e-voting technology in Pima County? If not, please consider holding public forums about this trend toward electronic centralization of the voting process. I am a life long Democrat and I can tell you that this is a non-partisan issue and a great concern to many in the community regardless of political party. I just did a web search that shows Tenex corporation has around 40 employees (all under 40 years old, apparently) yet its website states they "serve" more than 32 million American voters. This kind of top-down control of our elections process by a private corporation is taking us in the wrong direction to ensure a safe and fair voting system for people in all political parties. It really is time for Pima County government to engage in public debate about maintaining local control of local elections by returning to tried and true manual vote counts. I'm guessing that the amount of money we are paying on voting software and equipment annually - far exceeds the cost of paying staff and renting precinct space. Prove me wrong - show us the numbers, the analysis, the budget/expenditure audits and then open this up to the public for debate.

Thank you for exercising wise discretion as our elected representatives.

Dear Supervisor,

I am writing with concerns about the upcoming Board of Supervisors vote on using voting centers and using the Tenex Software solutions technology for the elections this year.

I think that we have had about 232 polling places in the past. I am ok with having voting centers as long as we have about 200 of them. Cutting the number down to about 100 would constitute voter suppression as there would be fewer locations available to us voters. Please vote NO unless there are about 100 more voting centers added to the proposed amount.

I oppose using the election technology system. Please vote **NO** on this.

Thank you!

- You are deciding whether to move from trustworthy record-keeping on paper to an untrustworthy electronic system in a time when rolling blackouts are becoming more common. If the lights go out, do we just close the polls?
- Senior leadership in the Pima County Elections division is retiring. This new system requires experienced leadership to implement without errors. Doing a “practice run” on the 2022 election with so many important statewide offices at stake is irresponsible during this time of Pima County’s elections leadership in transition.
- At the discussion on 3/1/22, please ask staff to provide audits or other side-by-side analysis showing the cost savings of e-poll books and voting centers versus precincts with paper polling books. This side-by-side analysis should also include the total annual cost for all the electronics and software used during elections including voting machines and software. Does this ballooning annual cost for more and more voting machines and software exceed the cost of a paper-based system of paper ballots, paper polling books and machine/hand counts to certify election results? Please show us the actual numbers, assuming staff has done that analysis, before recommending another \$1.5 million in expenditures for cloud-based solutions.
- Has Pima County ever held public polls or surveys where members of the public were asked to provide input concerning whether there should be more or less e-voting technology in Pima County? If not, please consider holding public forums about this trend toward electronic centralization of the voting

FD 28322M1001FC CLK OF DD

process. This is a non-partisan issue and a great concern to many in the community regardless of political party. I for one am concerned that Tenex Corporation has less than 20 employees yet its website states they "serve" more than 32 million American voters. This kind of top-down control of our elections process by a private corporation is taking us in the wrong direction to ensure a safe and fair voting system for people in all political parties.

As a constituent I am asking you to vote no on allowing vote centers in place of polling places. Also vote no to the e-poll books. I don't believe this is in the best interest for the county at this time.

Thank you,
Sherri Muncrief

Clerk of the Board,

Please read my comments into the official record.

As a Pima County resident and citizen, I contact you today to implore you to vote **NO** to voting centers and new technology for our upcoming elections. As you take up this matter once again, please do not allow the Election Board's push to de-stabilize our upcoming elections. This is not the time to be making radical changes to how citizens vote! The Election department's recent staff turnover will absolutely guarantee chaos and confusion for residents/voters, at a time that trust in election procedures and practices are low.

With what we just went through in 2020, this is not the time to introduce new procedures and technology to voters. Research shows consolidating polling places suppresses voter turnout. This is particularly true for minority and low-income voters.

Pima County needs to earn back the trust of voters by ensuring our local precinct voting locations aren't consolidated, and there's no change to our paper Pollbooks.

Thank you,

Maria Lopez

Please read my comments into the official record. I ask you to NOT further alienate Pima County voters with centralized Voting Centers and E-Pollbooks.

During the 2/15 BOS meeting most of you expressed concerns about unknowns with the ability to successfully implement these new processes for the upcoming Election season. A good steward of any business or home would be hard pressed to Vote YES as all of you did, except Supervisor Christy, on an initiative impacting all of Pima County and our ability to exercise our constitutional right.

Additionally, I learned after the BOS of meeting from Supervisor Christy that the Records Office and/or Elections Department has already been allocated funding to place purchase orders for the equipment. Are you just covering your tushies now? What a shame the BOS is pulling on the Pima County citizens.

I disagree with the initiative as a whole for reasons stated below, but knowing 4 out of 5 of the BOS voted YES raises questions as to the true intention of attempting to implement now. Are you all trying to cause more commotion to call into question the results of the upcoming Elections?

Respectfully,
Lisa Stuessel
Pima County Resident

Subject: NO VOTE - Electronic Pollbooks / Voting Centers

Please read my comments into the official record. I ask you to NOT further alienate Pima County voters with centralized Voting Centers and E-Pollbooks. Elections should be brought to the voters and NOT unnecessarily force voters to travel unjustifiable distances to cast their vote in an Election. Pima County is not a 3rd world country and voters should not be treated as such.

In January 2022, I participated in meetings with the Elections Department Acting Director, Mary Martinson, and Pima County Recorder, Gabriella Cazares-Kelly. Both expressed their biggest concern is the lack of

10/17/21 10:42:22 AM
10/28/22 10:01:10 AM
10/28/22 10:01:10 AM

voter confidence in the Pima County Election process and the fatigue of office workers fielding phone calls from furious voters. Reducing the number of polling locations will most certainly increase voter complaints and connecting election equipment to the internet will continue to reduce voter confidence.....Neither of these proposed process changes addresses Pima County's biggest concerns.

Additionally, with the various Election Integrity bills currently in process at the State level, it would appear premature to implement such sweeping changes at this time. The money to implement the new processes for one election cycle will be wasteful.

BUT maybe none of this matters to the Election Integrity Commission who has recommended approval and to the Pima County Board of Supervisors should they approve, too. ***Implementation of Voting Centers and E-Pollbooks will ensure CHEATING continues and appears to TRUMP (no pun intended) restoring voter confidence.***

PLEASE DON'T GIVE VOTERS ANOTHER REASON TO SIMPLY DECIDE TO STAY HOME.

Respectfully,

Lisa Stuessel

Please enter this into the official record.

I would like everyone on the Pima County Board of Supervisors to know I vehemently oppose Vote Centers and E - Pollbooks and request they vote NO on allowing Vote Centers and E-Pollbooks for this year's elections. I learned the Elections Department recently had experienced workers retire or leave the department. Implementing something untested is not good business practice, but doing so when the department is in flux is a recipe for disaster.

Please vote NO on Vote Centers and E-Pollbooks.

Respectfully,

Ray Darragh

Subject: Re: 3/1/22 Addendum Agenda Item: Please vote "no" to Tenex Software Solutions Contract

CAUTION: This message and sender come from outside Pima County. If you did not expect this message, proceed with caution. Verify the sender's identity before performing any action, such as clicking on a link or opening an attachment.

Dear Supervisors:

I urge you to vote "no" at this time against approving the \$1.5 million contract with Tenex Software Solutions for the following reasons:

- Internet connectivity must remain unbroken at all times on election day for these e-poll books to function effectively. There is no evidence that this kind of internet connectivity can be assured in rural areas, on tribal lands, or in underserved communities within the Tucson metro area.
- You are deciding whether to move from trustworthy record-keeping on paper to an untrustworthy electronic system in a time when rolling blackouts are becoming more common. If the lights go out, do we just close the polls?
- Senior leadership in the Pima County Elections division is retiring. This new system requires experienced leadership to implement without errors. Doing a "practice run" on the 2022 election with so many important statewide offices at stake is irresponsible during this time of Pima County's elections leadership in transition.
- At the discussion on 3/1/22, please ask staff to provide audits or other side-by-side analysis showing the cost savings of e-poll books and voting centers versus precincts with paper polling books. This side-by-side analysis should also include the total annual cost for all the electronics and software used during elections including voting machines and software.
