#35. Does Transportation Master Plan have the goal of repairing streets, facilitating transportation instead of creating congestion, making buses and bus stops safe, keeping impaired pedestrians and drivers off the roads? Or does it waste money on projects that pretend that humans can control global climate?

Project Blue. What is being done to provide equal opportunity to other industries and citizens with regard to permitting, environmental rules, and access to affordable energy and water? These projects require immense amounts of electricity, which requires massive amounts of copper (silver is better but we already use every bit of silver we can mine). But it can take 29 years to develop a mine in the U.S.

#21. What is the cost of construction of a unit? Who is responsible for maintenance? Does anyone have an ownership interest?

#25. Why is the cost of drugs so high? Are HIV drugs being given only to people who are HIV+, or are they prophylactic to permit inmates to engage in high-risk behavior? Is such behavior permitted in prison? Why are inmates getting hepatitis C?

#43. What is being done for maternal and child health? Decent diet, prenatal vitamins, diabetes screening? Or is it mainly about jabs for which adequate maternal safety testing has not been done?
