[REDACTED]

*Please add my comment into official records.*

Good morning,

When can Pima County voters expect final results of the Election? The longer it takes the less we trust any results. Are we finding more ballots? What's going on? What's taking such a long time? Please hire Floridians to show Arizonans how it's done. They counted 7.7 Million ballots in 5 hours. If the process is handled differently there, then we should adopt similar ones.

We were told that voting with the machines would be faster and more efficient. Also the cost of this does not compute when compared with a full hand count. It seems counter productive. Put me in a list for a Full hand count. Americans would participate for free just like we did for the 2% count.

Because this takes so long,

I'm now dead set against these useless machines. More importantly, tabulators still don't hold a valid accreditation per our laws ARS 16-442b nor per the HAVA Act of 2002!

Don't just blindly rely on the hyper-partisan Secretary of State. You and your lawyers have a duty of care when you became aware of it, to look into these allegations! Fixing EAC bylaws after the fact is not a good strategy, it's like an admission of guilt and reeks of a coverup. The EAC's mailing out letters without a date nor signature line also proves that nobody wants to admit wrong doing. Unacceptable!

A FULL Hand Count would considerably ease voter distrust and promote election integrity. That's the only way.

Sincerely,

Gisela Aaron
