

6. Traffic and Improvement Analysis

Level of Service Analysis

Roadway Performance

Exhibit 14 summarizes the new ADT and daily volume capacity (LOS D) of the roadway segment with and without the project in 2017.

The table shows that based on the growth of 3%/year estimated for the background traffic, and the LOS D criteria found in FDOT's *Generalized Annual Average Traffic Volumes in Urbanized Areas*, the 2017 no project and 2017 with project volumes will not exceed the theoretical daily service volume LOS D thresholds.

Note that we estimated that half of the no project traffic south of Valencia Road to Star Valley would use Wade Road and the other half would use Camino Verde.

Exhibit 14 Future Roadway Volumes and Capacity

Roadway Segment	2017 ADT (No Project)*	Site Traffic	2017 ADT (With Project)	LOS D Threshold**
Valencia Road: West of Wade Road	9,863	1,652	11,515	15,930
Valencia Road: Wade Road to Camino Verde	17,464	2,479	19,943	35,800
Valencia Road: East of Camino Verde	14,432	1,652	16,085	35,800
Wade Road: South of Valencia	4,202	826	5,028	15,540
Camino Verde: North of Valencia	8,323	826	9,149	15,540
Camino Verde: South of Valencia	4,202	551	4,752	15,540

*Assumed 3%/year growth

Intersection Performance

For the year 2017, we analyzed the project intersections with and without project trips. The results for the peak hour intersection analysis are provided in Exhibit 15 (no project) and Exhibit 16 (with project).

As shown in the summary tables, all intersections will operate at LOS D or better with and without the project.

Traffic Safety

Sight Distance

The project driveways and intersections should be designed to allow for acceptable sight distance. Sight distance is typically shown on the development plan and improvement drawings. The guidelines for sight distance are provided in Pima County's Roadway Design Manual.

Turn Lane Analysis

A turn lane "warrant" is a justification for constructing a turn lane, based on traffic volumes at an intersection. Turn lanes are warranted based on these criteria when the peak hour turn lane volume exceeds a trigger based on the two-way daily volume (ADT, or Average Daily Traffic as indicated in the table) on the roadway.

Pima County's Subdivision and Development Street Standards provides turn lane warrant guidelines for County roadways. These guidelines are shown in Exhibit 17.

Exhibit 17 Turn Lane Warrant Criteria

Table 3.4. Maximum left turn volume in the peak hour without a left turn lane (modified from IHSDM¹³)

Posted Speed (mph)	ADT (2-way)			
	<2,600	2,600-5,000	5,000-10,000	>10,000
≤ 35	75	50	30	15
40-50	75	40	20	10
≥ 55	75	30	10	5

Table 3.5. Peak Hour Volume Warrant for Right Turn Lanes (modified from IHSDM¹³)

ADT (2-way)	Max. Peak Hour Right Turn Volume (w/o RT Lane)
2,500-5,000	100
5,000-10,000	70
>10,000	40

Based on the warrants, an eastbound left turn lane, a southbound left turn lane and a westbound right turn lane are warranted at the Valencia Road/Wade Road intersection. A 150 foot eastbound left turn lane is being constructed as part of the Valencia Road (Mark to Wade) widening project.

Turn Lane Design

Turn lane design standards are found in the Pima County Roadway Design Manual and the PC/COT Pavement Marking Standards. The Tucson Mountain Commercial project will require a north connection from the Valencia/Wade intersection. This connection should include an exclusive southbound left turn lane. A westbound right turn lane is also warranted at this intersection.

The southbound left turn lane should be designed to a minimum 110 feet in length with transition and taper designed to Pima County standards. It should be noted that a longer turn lane will likely be necessary with the entire Tucson Mountain Ranch project. The north leg of this intersection should be designed to accommodate a future longer left turn lane or be constructed as a three-lane roadway with one lane in each direction and a two-way left turn lane.

Pedestrian, Bicycle, and Transit Considerations

Sidewalks and bike lanes will be constructed on Valencia Road as part of the current RTA project. There are no bus routes in the vicinity of the project. Sidewalks should be constructed on the west side of Wade Road and along Valencia Road along the frontage of the project.

Speed Considerations

When Wade Road is opened north of Valencia Road, the County will need to assess the future speed limit for this roadway based on its future functional classification.

Other Considerations

North Leg of Valencia/Wade

Wade Road, north of Valencia Road is shown on the current Major Streets and Scenic Routes Plan (MSSRP) map as a roadway with a 150' right-of-way. Pima County is proposing to revise the MSSRP and Wade Road is proposed to be reclassified as a low volume arterial with a 90' right of way.

The roadway plans for Valencia Road, Wade Road to Mark Road (Pima County Project No. 4RTVMW) do not include the construction of a north leg at the Valencia/Wade intersection. A new drainage structure is shown on the north side of this intersection. This drainage structure is part of a new reinforced concrete box culvert shown to go under Valencia Road and to "daylight" on the north side of Valencia Road where the north leg of the intersection would be located. We recommend that Pima County relocate, or reconfigure this structure to allow the future construction of the north leg of this intersection.

Corner and Driveway Clearances

The site plan shows that the driveway spacings and corner clearances for the driveways on Valencia Road meet the County standard of a minimum 230 feet for a 45 mph roadway. The site plan shows that the driveway spacings and corner clearances for the driveways on Wade Road meet the County standard of a minimum 150 feet for a 35 mph roadway.

Queuing Analysis

Pima County requires an assessment of storage length estimates for intersection turn lanes based on anticipated traffic at study area intersections. For roadways that are posted for 40 mph or above, the minimum storage length standard in Pima County is a 150 feet for turn lanes on roadways. For less than 40 mph, the minimum storage length is 110 feet. Driveways should be designed to have a minimum 50 foot throat length, so this was considered to be the minimum length for queue from the driveways.

Storage lengths should be extended if existing or projected traffic volumes at intersections queue beyond the calculated 95th percentile queue length, so that queuing vehicles do not back up and encroach into other lanes.

The Synchro software estimates queue lengths for all intersection turning movements. Exhibit 18 shows the existing storage lengths for turn lanes at the project area intersections and indicates whether the calculated 95th percentile queue lengths exceed the physical storage lengths of the turn lanes. The analysis

was done for the year 2017 “With Project” conditions. These estimates should not be used for design purposes. A reassessment of the queue lengths should be conducted at the development plan stage.

Travel Demand Management

There are no TDM elements associated with this project.

Tucson Mountain Ranch Cluster Development

This commercial project is located at the southeast corner of the larger Tucson Mountain Ranch Cluster Development. A site analysis document for this larger project was prepared by The WLB Group in 2014. This development is a 461 residential lot project with access onto Wade Road, Valencia Road and Valhalla Road. If this project is constructed as planned, it will add approximately 4,500 additional daily trips and 460 peak hour trips to the area. This project is still in the rezoning stages and no schedule has been developed for the build out of this project. However, a traffic study should be conducted at the development plan stage to determine infrastructure needs as a result of the impact of this project.

7. Conclusions and Recommendations

1. The project will generate approximately:
 - 124 morning peak hour trips,
 - 479 evening peak hour trips,
 - 5,508 weekday trips.
2. Valencia Road is under construction to be widened to a four-lane desert parkway from Wade Road to Mark Road. Plans should be modified to construct the north leg of the Valencia/Wade intersection.
3. Full access is possible at the driveways on Wade Road. Access locations on Valencia Road should be limited to right-in, right-out movements due to the planned construction of the raised median on Valencia Road.
4. The southbound approach of the intersection at Valencia/Wade should include an exclusive 110 minimum foot left turn lane and a shared through/right lane. The westbound approach should have a 150 foot minimum right turn lane. A preliminary queuing analysis shows that the 95th percentile queue lengths based on the Synchro analysis and the impact of this project are less than the Pima County minimum length standards. The County may wish to extend these lanes, or construct the north leg of the intersection as a three lane road to accommodate future Tucson Mountain Ranch residential traffic.
5. Turn lanes are not numerically warranted at all other project driveways.
6. Sidewalks and bike lanes should be constructed on the west side of Wade Road along the frontage of the property.
7. Sight distance at the project intersections should be ensured according to criteria in the Pima County *Roadway Design Manual*.
8. All signs and pavement markings associated with the recommended improvements must conform to the MUTCD and Pima County requirements.

APPENDIX

- TIA Checklist
- Traffic Data
- Synchro Analysis Sheets

M ESPARZA ENGINEERING TRANSPORTATION IMPACT STUDY CHECKLIST AND SUBMITTAL FORM

Please complete this form PRIOR TO PREPARING A TRAFFIC REPORT.

Submit the completed and approved form with your study. Studies will not be submitted without this checklist attached. (Approval of this form does not constitute approval of the study.)

Project Name: Tucson Mountain Ranch Commercial (ME Eng 2015.03)

Project Location: Northwest corner of Valencia Road/Wade Road (site plan attached)

Applicant/Developer: G. Paul Oland (The WLB Group) for Gus Fotinos

Consultant: M Esparza Engineering, LLC

Address: 6542 W Winter Valley Way Phone: 520-207-3358

City/Town: Tucson

State: Arizona E-mail: mue-cla@cox.net

Arizona Civil Engineering Registrant? Yes

Was the consultant actively involved in the site circulation, roadway layout, and selection of access locations? No.

Brief description of project:

Commercial project with 129,000 square feet of commercial/retail uses. Access is shown on the site plan at three locations on Valencia Road and at three locations on an extension of Wade Road, north of Valencia Road.

Current and proposed zoning:

Current zoning is County Manufactured and Mobile Home Zone 1 (CMH-1). The proposed zoning is Local Business Zone (CB-1)

Pre-submittal Meeting Held on 3/26/2015

Summary of Meeting:

Traffic topics discussed: The north Wade Road extension conflicting with Valencia Road widening plans; the number of access points on Valencia Road and Wade Road, and access on Valencia Road from the planned development south of Valencia Road.

Nature of Transportation Study – To support a rezoning application.

Rezoning study? Yes No

Development Plan? Yes No

Block Plat? Yes No

Subdivision Plat? Yes No

New Median Openings requested? Yes No (A possible opening at the western Valencia access – to be discussed in the TIS)

Access via Non-Agency Roadways? Yes xNo

Coordination with Multiple Agency(s)? Yes xNo

Transportation Study Parameters

Trip Generation	Land Use Categories and Rates: Shopping Center use (ITE LU Code 820) for 129 KSF will generate 124 am peak hour, 479 pm peak hour and 5,508 daily trips at buildout. As such we will prepare a Category 1 TIS.
Horizon Year(s)	2017 is the assumed buildout year. A growth rate of 3%/year will be applied to estimate background traffic for the buildout year.
Passer-by Traffic & Internal Capture	Pass-by trip reduction of 34% in the pm peak hour per ITE Trip Generation Handbook for Shopping Center.
Alternate Modes Considerations	Bikes: Bike lanes are being constructed on both sides of Valencia Road from Mark to Wade. There are bike lanes on each side of Wade Road south of Valencia Road. Pedestrian Facilities: A sidewalk is being constructed with the Valencia Road project from Wade to Camino Verde on the north side of Valencia. A multi-use path is being constructed on the south side of Valencia from Wade to the east. There are no pedestrian facilities on Wade Road.
Traffic Data	Pima County provided 2014 counts at the Valencia/Wade and Valencia/Camino Verde intersection. I collected 1 hour peak hour counts at the Valencia/Camino Verde intersection after the opening of the south leg. 24 hour roadway volumes on Valencia, Wade and Camino Verde are available from Pima County and PAG. Crash data is available from Pima County's SMS.

Analysis Elements and Methods

Roadways	Our analysis will focus on the roadways (Valencia, Wade and Camino Verde) in the vicinity of the project access locations. We will assess the daily service volumes and capacities on these roads with and without the project.
Intersections	We will analyze the project access intersections and the Valencia/Wade and Valencia/Camino Verde intersections using either the Highway Capacity Software or Synchro.
Special Considerations	Based on the one-hour am and pm peak hour counts I collected at Valencia/Camino Verde following the opening of Camino Verde to the south, I will estimate the redistribution in traffic volumes from the collected traffic volumes in 2014 at Valencia/Camino Verde and Valencia/Wade. I have estimated that 30% of the site traffic will be to the east and 30% to the west on Valencia; 15% will go south on Wade, 15% to the north on Camino Verde and 10% south on Camino Verde. We will generally discuss the impacts of the development to the south and the larger Tucson Mountain Ranch project.

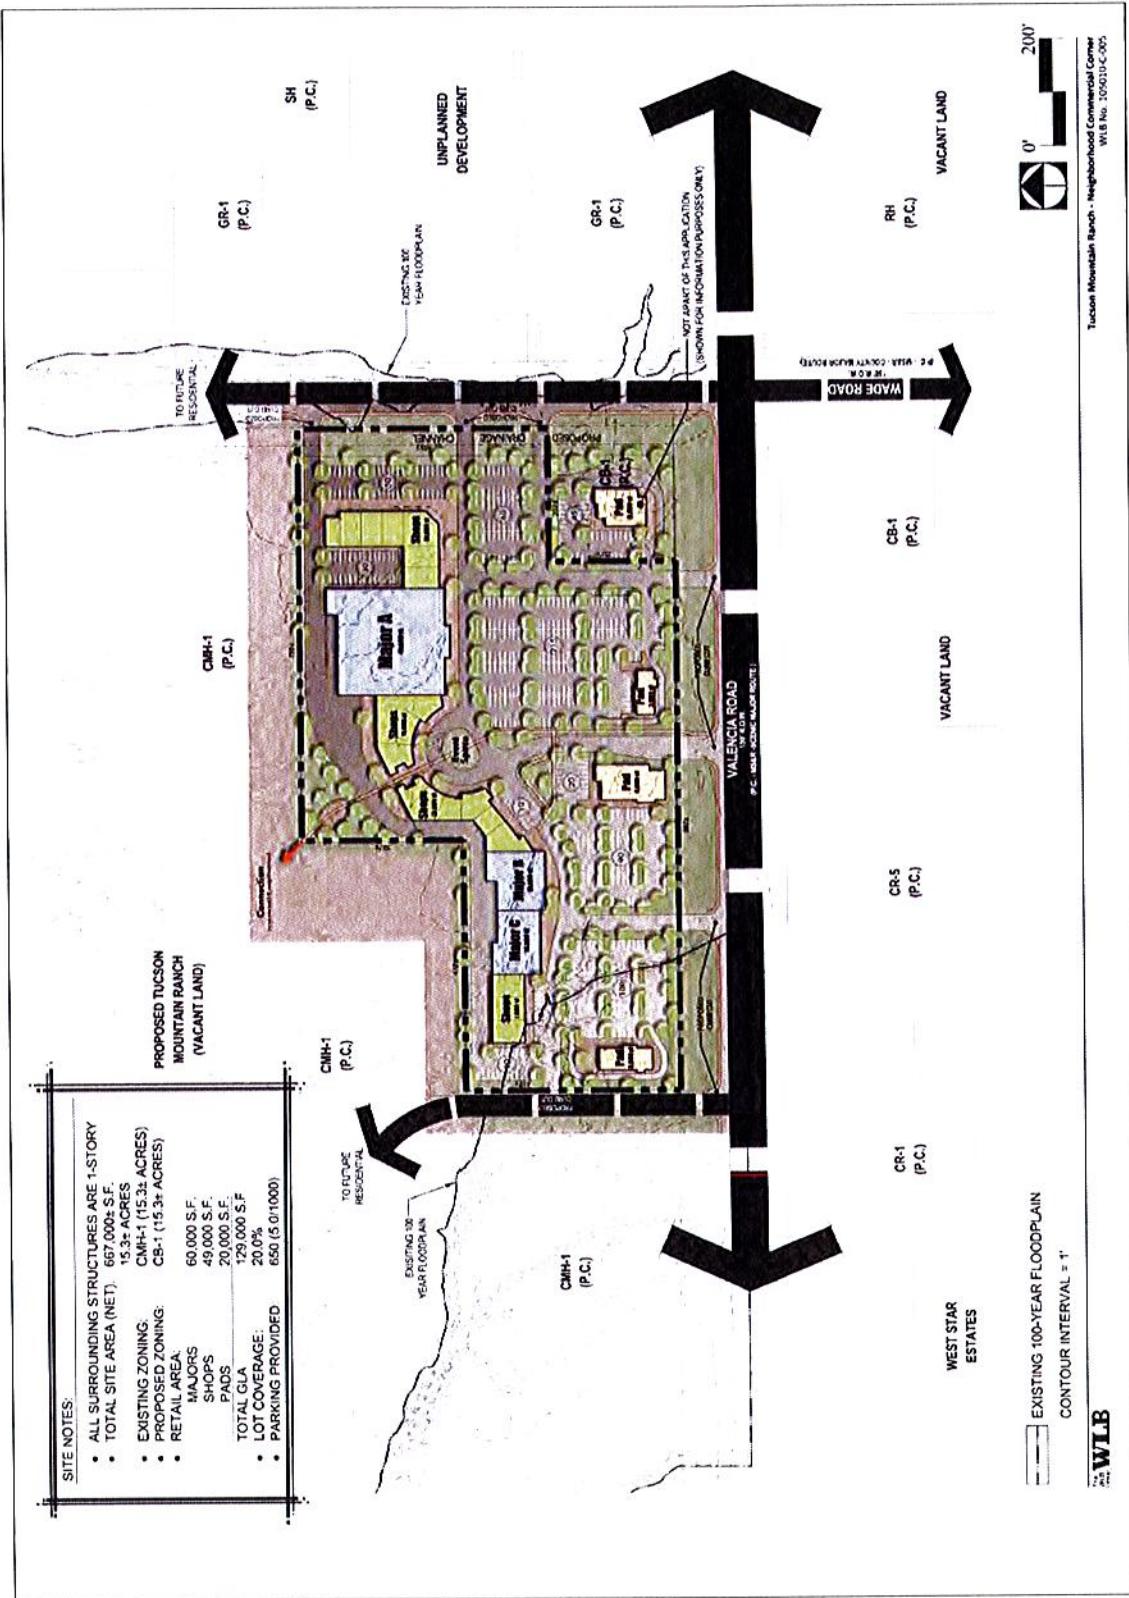

We concur that the information above is correct and that the study will include the parameters and elements described above.

P.A.S.T. ABSTRACT & PROJECT SUMMARY FORM

P.A.S.T. JOB NO. 051745

SUMMARY. An on-foot cultural resources survey of private property (160 acres) near Tucson in Pima County identified cultural resource AZ AA:16:493 (ASM). Based on prior fieldwork and archival documentation, further cultural resource studies do not appear to be warranted on the property because the information potential of AZ AA:16:493 (ASM) has been exhausted through the formal recording of the site with the Arizona State Museum.

COMMENTS (see report narrative additional information)				
The quantity of artifacts within the subject property and data about known sites suggests the undertaking will impact no important cultural resources. The information potential of the cultural resources encountered (AZ AA:16:493 (ASM)) has been exhausted through the recordation activities. The project sponsor should be allowed to develop the subject property without further cultural resource studies.

**Cultural Resources Survey Of
Drexel Quarter Project
Near Tucson, Pima County, Arizona
PAST No. 051745**

Introduction.

Personnel from P.A.S.T. reviewed field and archival information for a 3 person-day, survey of the Drexel Quarter property conducted on October 9 & 16, 2005 located in Pima County near Tucson in anticipation of residential development. The purpose of the project was to determine whether any significant cultural resources that might be adversely impacted by construction were present. The project sponsor (The WLB Group) initiated this study in accordance with municipal requirements. P.A.S.T. holds permit 2005-42bl issued under the Arizona Antiquities Act through the Arizona State Museum.

Project Location.

The approximately 160 acre project area is located in the south western portion of the Tucson Basin (Figure 1). The location with respect to the Public Land Survey is within the NE4 of section 9 T15S R12E G&SRB&M. The project area is located on the Cat Mountain United States Geological Survey 7.5' map. The UTM values for selected boundary points are shown on the map to indicate the extent of the parcel. The boundary shown on the map is reasonably accurate given the limitations of a 1:24,000 scale map. It is based on data and maps provided by the client as well as field observations but it is not intended to represent the precise legal extent of the parcel. Unless otherwise noted, land ownership coincides with the parcel and survey boundary shown in Figure 1. The fieldwork was conducted on private lands.

Base Maps Included In Report

Figure 1 is a copy of a portion of the U.S.G.S. Cat Mountain 7.5-minute topographic map that shows the project boundaries (including UTM values), archaeological sites within the project area, and all isolated artifacts and features found during the survey.

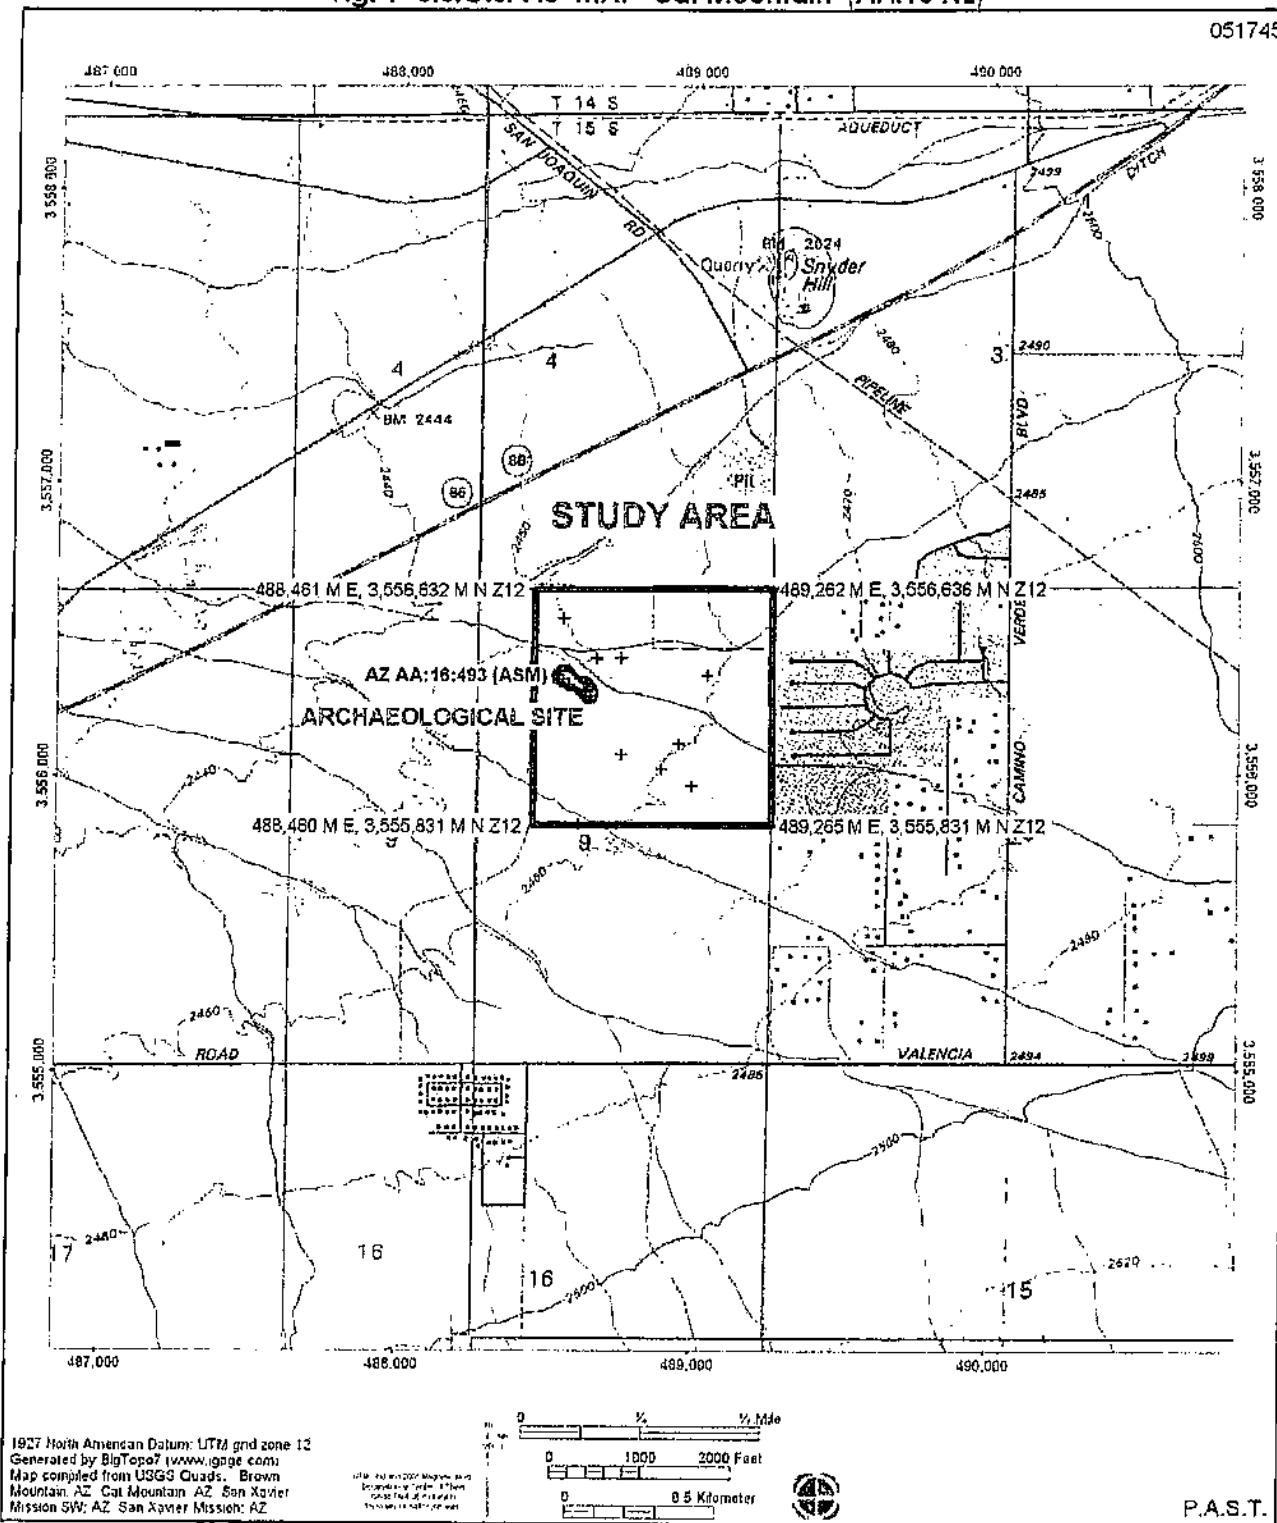

Figure 2 is a site map depicting the site boundary, appropriate natural features and major elements of the site.

BACKGROUND TO STUDY AREA:

Records Review.

A review of the records of the Arizona State Museum (ASM), in anticipation of the survey indicated that the subject parcel or adjacent lands had undergone an archaeological survey. This fieldwork (cite) revealed that cultural resources (AZ AA:16:493 (ASM)) were present on the subject parcel. Additional recorded cultural resources within a 1.6 kilometer radius of the center of the project area are also listed in Table A-2 and on the project summary form.

February, 06

NOTE: Due to the sensitivity of site locations, only sites within the project area are depicted on the map.
Site locations as well as their geometric representation and extent are approximate.

Culture History.

The antiquity laws apply to human cultural remains in excess of 50 years of age and require them to be assessed as to their potential for yielding important information. Consequently, sites and artifacts dating from the mid twentieth century and earlier must be evaluated. The historical period that commenced in roughly 1700 is comprised of the Spanish, Mexican and Anglo occupations with some researchers recognizing the protohistoric as a transitional culture from the earlier prehistoric occupations. The prehistoric peoples who lived in this region include the Hohokam, Archaic and Paleoindian cultures.

The Hohokam (A.D. 450 - 1450). The Hohokam were a sedentary, agriculture-based people who produced both plain and decorated pottery, along with numerous other crafts of shell, stone and clay. They were skillful agriculturists who lived in houses built in shallow pits and constructed extensive irrigation canal systems. In some of the larger villages, they built ballcourts that probably served as focal points for ceremonial or recreational activities. Whether the Hohokam migrated into the region from Mexico or developed from indigenous Archaic populations is still hotly debated. The Hohokam cultural sequence was established in the 1930s based on the decorated pottery types unearthed at the Snaketown Site in the Phoenix Basin. Shortly thereafter, Isabel Kelly modified this chronology to fit the Tucson Basin sequence after her excavations at the Hodges Ruin in Tucson. Since that time, the continual acquisition of new archaeological data has brought about many refinements in the chronology.

Archaic Era (7500 B.C. - A.D. 450). The Archaic era has traditionally been characterized by assemblages of chipped stone artifacts along with ground stone tools for processing plant materials, and a lack of ceramics. Recent research in the Tucson Basin and elsewhere has demonstrated the presence of pit house villages, agriculture and some ceramics in the Late Archaic. The shift from a hunting-based economy to a reliance on plant foraging and small-game hunting that characterized the Archaic sites was caused by the extinction of Pleistocene mammals favored by the Paleoindians.

Paleo-Indian Era (ca. 10,000 - 7500 B.C.). Eleven thousand years ago, the climate in the Southwestern United States was considerably wetter and cooler than it is today, and much of the terrain consisted of lush grasslands that supported herds of mammoth, bison and other large grazing animals. Many of the earliest occupants of the area, known as Paleoindians, were hunters who subsisted on these large, late Pleistocene mammals. The belief that many of the Paleoindians were primarily big-game hunters is supported by the fact that most of the Paleo-Indian sites that have been excavated have been kill and butchering sites. The artifact assemblages from these sites are made up of projectile points and other stone tools suitable for skinning animals and cutting meat and bone. The earliest Paleo-Indian artifacts found in southern Arizona belong to the Clovis complex (9500-9000 B.C.), which is characterized by long, lanceolate, fluted Clovis points, along with other stone implements and bone artifacts.

Survey Expectations.

This project's study area was located in a portion of southern Arizona that is conducive to prehistoric and/or historical settlement. Therefore, it was considered a reasonable likelihood that prehistoric or historical sites would be found during the survey.

CULTURAL RESOURCES SURVEY:

Methods.

The original field work consisted of an intensive on-foot coverage of the property in order to identify and locate any cultural resources, historic or prehistoric, within the property boundaries (site). Field personnel walked transects approximately 20 meters apart and crossed the subject property in a series of contiguous corridors with any areas of extreme slope covered less intensively. Survey transects paralleled the longest dimension of the property except when prevented by the landform, vegetation density or hydrological features. Unless noted otherwise, the transect count is the quotient of the transect extent and parcel width. General conditions were good for conducting the fieldwork. Ground visibility was ~~mildly~~ moderately affected by the presence of trees, shrubs, semi-shrubs, succulents and grasses. The original land-form was moderately disturbed by modern alterations to the ground surface.

Survey Results.

The information derived from the fieldwork is generally in keeping with the expectations generated from archival and literature sources. Part of the project area fell with the nominal boundary of AZ AA:16:493 (ASM). Nominally there were sufficient surface indications of archaeological materials on the property to meet the Arizona State Museum minimum standard for recording as an archaeological site.

Site description for AZ AA:16:493 (ASM). The site consists of a very light scatter of prehistoric artifacts across a 110 m by 30 m area on private lands. The vegetation at the site is not different from that described earlier for the survey area discussed above. The artifacts are associated with a deflated rock-filled roasting pit with 16 fire cracked-rocks in a 40 cm area. The roasting pit is pedestaled approximately 3 cm above a deflating ground surface and has no indications that any materials remain subsurface. It is located in a deflating area between two washes. The artifact scatter includes five basalt flakes, one Middle Rincon decorated brownware, seven discrete plainware sherds, and a cluster of 14 plainware sherds that represents what appears to be a large sherd that was recently crushed by an off road vehicle. These artifacts represent debris left behind by prehistoric people harvesting and processing resources. No artifacts concentrations or other evidence of subsurface materials such as houses or armadas were observed. The site condition is not good because of erosion. The likelihood of human remains being found at this type of site is low.

Criteria for Significance Evaluation.

Archaeological and historical sites generally are not considered significant unless they are eligible for listing in the National Register of Historic Places. To be listed in the National Register a historic property normally must be at least 50 years of age and must be significant according to the following definition:

The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- A) that are associated with events that have made a significant contribution to the broad patterns of our history; or

- B) that are associated with the lives of persons significant in our past; or
- C) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D) that have yielded, or may be likely to yield, information important in prehistory or history (National Park Service 1986)

Significance Assessment.

Archaeological site AZ AA:16:493 (ASM) could qualify for National Register listing under criterion "D" (cited above) if it could provide new data important in prehistory or history. In order for the site to provide new cultural information about the cultural group who made and used it, it would need to retain some of its original integrity and be associative with a specific period of prehistory or history. The surface of the site has been significantly eroded since abandonment. The lack of depth to the deposits and deflation of the ground surface from hydrological processes make it unlikely the site retains sufficient physical integrity to yield meaningful information beyond that which was gathered during recordation process.

In summary archaeological site AZ AA:16:493 (ASM) contained archaeological materials that met the A.S.M. site definition standard criteria but currently does not appear to have the potential to yield information beyond that which was derived from the recording the resource.

Eligibility Evaluation.

Since the site has been recorded, and no important information can be obtained through further studies, P.A.S.T. recommends that AZ AA:16:493 (ASM) not be considered significant under Criterion D listed above.

Evaluation Of Effects Of The Proposed Project.

Considering the nature of the cultural resources found on the property and the work already completed, the development of the inspected parcel will not have an effect on potentially significant cultural resources.

Recommendations.

Based on the archival information, field methods, the observable surface indications and because none of the materials observed on the subject property have potential to provide important archaeological or historical information beyond what has been already obtained for this resource, P.A.S.T. supports approving the sponsor's application. Although P.A.S.T. does not endorse additional archaeological studies for this project, ground-disturbing activities on the property should not commence without authorization by the agency archaeologist(s).

There remains the possibility that ground-disturbing activities could reveal the presence of heretofore undiscovered cultural resources. If such materials are discovered construction activities should stop. Consultation should be initiated with the appropriate agency archaeologist, and if applicable under ARS §41-841 et seq. the Arizona State Museum, to assess the potential significance of any materials unearthed.

Under State law (ARS 41-§865 & §41-844) if human skeletal remains or funerary objects are discovered on either public or private lands the Arizona State Museum should be contacted immediately.

NOTE FOR ADOT INVOLVED PROJECTS: If previously unidentified cultural resources are encountered during activity related to the use of this source, the contractor shall stop work immediately at that location and shall take all reasonable steps to secure the preservation of those resources. The Engineer will contact the ADOT Environmental Planning Group, Historic Preservation Team at 602.712.8641 and make arrangements for the proper treatment of those resources.
